worth trying when you need to rebuild your entire WMI repository in order to fix your SCCM environment.

There might be situations when you get stuck at 'Please Wait' and 'Welcome' screens when booting the operating system. In this manner, you are

not able to access your system or your important files, so further actions cannot be performed unless you reinstall the Windows. However, with the help of WMI Rebuilder you can easily run the hot fixes in order to fully patch up your machine and

fix the issues so you can go beyond those screens. WMI (which also stands for Windows Management Instrumentation) defines a proprietary set of specifications that allow management data to be shared between managements apps and since these

repositories get bigger day by day, your machine might not work properly at some point. Using WMI Rebuilder you can reset the WMI repository, then the hot fix will stop it from running. However, this depends on what is causing the current

issue which blocks your machine on the 'Welcome' screen. Still, you need to make sure that you run the.bat file in the Safe Mode, otherwise you might get dead screens and your system will might run slower than before. First off, you need to login on the

affected machine with a local admin account. After that, you need to locate the WMI service and access it, then change its state to Disabled from the drop-down menu. Please note that if you stop the service, it may crash your Windows, so you need to pay

attention when disabling the service. Once you have copied the batch files to a predefined folder, you need to reboot the machine and press the F8 key in order to enter the Safe Mode. WMI Rebuilder will automatically disable the necessary services

and rebuild your WMI repository. Still, the process might take a while so you need to let the application to finish its work, no matter the time required for fixing your system.

Considering all of the above, WMI Rebuilder proves to be an

effective solution that comes in handy for users who get stuck at the 'Welcome' screen each time they open their computer and need to rebuild the WMI repository in order to access their files again and make the system to run quicker. Association of

WMI Rebuilder With Key

Add the command line

to a hotkey, which will be called whenever a specific string is found in a file. Hotkey can be set to execute this command:

`MKLANG=c:\test.txt`

a Or

`MKLANG=c:\test.txt`

a.b The value a is for a hotkey with the function “a” and a.b

for hotkey with
function “a” and
function “b”. For
example: Hotkey
macro name: b The
command:

`mklang=c:\test.txt a.b`

Checks each line of
file test.txt for the text:
“Hello world” and runs
the command a.b in
the case of a match.

Keymacro for “Hide
Caption” key:

`KHLP=e:\test.txt`

Pressing the Hide
Caption key and

pressing Alt+H with
the specified hotkey
will hide the caption.

The first press hides
the caption for the
active window, and the
second press hides all

the captions. It is possible to add a shortcut to the system's desktop instead of a macro, in which case a shortcut to the keyboard macros is created with the same name. The hotkey must match the name of the macro and the hotkey of the macro.

For example: hotkey
macro: b The macro
hotkey b matches the
name of the hotkey of
the macro hotkey
macro: b.

Hotkey:e:\test.txt
Creates a hotkey with
the name of the macro
with the name of the
hotkey of the macro,
the value of the hotkey

of the macro, the file
with the name of the
hotkey of the macro
and a file extension.

For example: hotkey

macro: a hotkey

macro: b The macro a
matches the hotkey a.

Hotkey:e:\test.txt

Creates a hotkey with
the name of the macro
with the name of the

hotkey of the macro,
the value of the hotkey
of the macro, the file
with the name of the
hotkey of the macro
and a file extension.

For example: hotkey

macro: a.b hotkey

macro: b The macro

a.b matches the hotkey

a. A hotkey with a
