It can also show the devices in the range of IP addresses, and the total number of IP addresses available.For any money an ordinary person has on them, it can be used as evidence in a court of law. That's one of the primary reasons why banks and government agencies use a type of encryption known as a "secure" PIN. But that same encryption can be broken by the right people, and that's the problem that one South Carolina woman is facing. The woman was arrested last week and charged with using a stolen credit card for $12,000 in purchases, according to a report by WBTW.com. That's because she used the credit card number from a stolen VISA debit card in order to make online purchases. The woman didn't actually use the card herself, but that didn't stop local authorities from arresting her, leading to one judge calling the situation "mind boggling." ADVERTISEMENT "It just boggles my mind to the point I just sit here shaking," the judge said. The suspect's lawyer explained that her client didn't know the VISA debit card was stolen, and that the PIN was "generated automatically as you purchase credit," so it wasn't really the victim's fault. But that hasn't stopped her from blaming the bank for "
